TAZ Course Cadet

Trainee User Guide

How to read live signals, trade contract levels, runner state, closed results, and preview readiness.

Guide purpose

This book teaches trainees how to read the TAZ Course Cadet software correctly. It is an operating guide for signal reading and trade management discipline, not a developer document.

Field	Details
Prepared for	TAZ Forex Academy trainees
Software name	TAZ Course Cadet
Contact	WA +92-315-2939539
Use	Training, signal-reading discipline, and guided trade-management education

Important Training Notice

Read this first

A trade is a live trade only when the Active Signal panel says LIVE LONG or LIVE SHORT. New Signal and Preview panels are guidance/readiness surfaces. They are not trade instructions by themselves.

TAZ Course Cadet is a training and signal-reading aid for Academy trainees. It does not remove trader responsibility. Trainees must follow instructor guidance, Academy rules, risk limits, and stop-loss discipline.

This guide explains how to read the software. It does not guarantee profit, remove market risk, or replace training supervision.

Rule	Meaning
Do	Use the Active Signal panel as the active trade contract when it shows LIVE LONG or LIVE SHORT.
Do	Use Entry, Stop Loss, TP1, and TP2 exactly as the current trade contract levels.
Do not	Treat Quality, Events, New Signal percentages, or Preview status as a guaranteed outcome.
Do not	Invent hidden Preview prices or enter when the software shows NO LIVE SIGNAL.

PART 1

Start Here

The fastest safe way
to read the software

TRAINING MANUAL

Quick Start: What to Check First

The correct trainee workflow is simple: check the Active Signal panel first. Everything else is supporting context.

Step	Trainee action
1. Check Status	If Status says NO LIVE SIGNAL, there is no active trade from the software.
2. If live	If Status says LIVE LONG or LIVE SHORT, read Entry, Stop Loss, TP1, and TP2.
3. Manage TP1	TP1 is a milestone. It can open a runner toward TP2.
4. End the trade	TP2 or SL completes the active trade. Rule Exit also completes the active trade when triggered.
5. Review Closed	After a trade completes, review Final / Real R, Targets, Time In/Out, Setup / Q, and Events.
6. Respect locks	If Preview is Locked or Prices are HIDDEN, do not invent a trade contract.

One-sentence operating rule

Trade only from the active trade contract. Do not trade from Preview or New Signal alone.

Main Screen Map

The software has four major reading surfaces plus chart lines. Each surface has a different job. Keeping those jobs separate prevents mistakes.

Full screen layout: Active Signal panel, Closed section, New Signal panel, Preview panel, and chart contract lines.

Item	Meaning	Trainee action
Active Signal	Shows the current live trade contract.	Use only when it says LIVE LONG or LIVE SHORT.
Closed	Shows the last completed trade and setup event history.	Use after a trade completes.
New Signal	Shows signal construction and readiness.	Read as condition context, not an entry instruction.
Preview	Shows whether a future candidate is allowed, locked, or hidden.	Never trade hidden prices.
Chart lines	Visual projection of active Entry, SL, TP1, and TP2.	Use as visual help; table remains the authority.

EDITION
2026

PART 2

Active Signal Panel

The active trade contract

TRAINING MANUAL

Active Signal Panel Purpose

Provider	TAZ Course Cadet
Contact	WA +92-315-2939539
ACTIVE SIGNAL	Live trade contract
Status	LIVE SHORT
Origin	PB SELL
Quality	Q95%
Entry Time	05-26 12:40
Event	SHORT ENTRY
Entry	4508.11
Stop Loss	4514.60
TP1	4501.62
TP2	4495.12
Runner	TP1 OPEN / RUN PEND
Runner R / Health	0.37R / 46%
Room to SL/TP2	8.90 / 10.58

Active Signal panel example. This panel is the live trade contract surface.

The Active Signal panel is the first panel trainees must read. It is the only panel that defines the current live trade contract.

Authority rule

When Active Signal says NO LIVE SIGNAL, there is no active trade from the software. When it says LIVE LONG or LIVE SHORT, the panel defines the active trade contract.

Active Signal Rows Explained

Item	Meaning	Trainee action
Status	Shows whether there is a live trade.	Trade only when this says LIVE LONG or LIVE SHORT.
Origin	Shows the signal family, such as PB SELL or MOM SELL.	Use it to understand the setup type.
Quality	Signal construction quality at birth.	Do not read it as guaranteed profit.
Entry Time	The time the signal became active.	Use it to locate the trade on the chart.
Event	Latest live event: entry, TP1 hit, etc.	Use it to know the live phase.
Entry	The active trade entry price.	Use as contract entry reference.
Stop Loss	The active trade protection level.	Respect it; do not ignore SL.
TP1	First target milestone.	TP1 can open runner management.
TP2	Final target.	When price reaches TP2, the trade is complete.
Runner	Shows whether TP1 is pending, hit, or runner is open.	Use for trade management status.
Runner R / Health	Current runner condition and health.	Read as live trade condition, not probability.
Room to SL/TP2	Distance remaining to stop and final target.	Use to understand current room in the active trade.

Status: Live or No Live Signal

Status / event	Meaning
NO LIVE SIGNAL	No active trade contract exists. Do not treat Preview or New Signal as an entry.
LIVE LONG	A live buy trade is active. Entry, SL, TP1, and TP2 define the contract.
LIVE SHORT	A live sell trade is active. Entry, SL, TP1, and TP2 define the contract.
SHORT TP1 HIT / LONG TP1 HIT	TP1 has been reached; runner may still be open toward TP2.

The Active Signal panel must remain clean. It does not show historical Events or probabilities because those belong to other panels.

Origin and Quality

Origin tells the signal family. Quality tells the construction strength at the time the active signal was born.

Example	Trainee meaning
PB BUY / PB SELL	Pullback-style signal family.
MOM BUY / MOM SELL	Momentum-style signal family.
RJCT BUY / RJCT SELL	Rejection-style signal family.
Q95, Q98, Q100	Construction quality notation. Higher Q means stronger construction by the software rules, not guaranteed outcome.

Quality is not probability

Q100 does not mean a 100% winning chance. It means the construction contract was very strong according to the software.

PART 3

Trade Contract Levels

Entry, SL, TP1, and TP2

TRAINING MANUAL

What the Contract Levels Mean

A live trade contract always has four core levels: Entry, Stop Loss, TP1, and TP2. A trainee must not change the meaning of these levels during a live trade.

Level	Meaning
Entry	The reference level where the active trade was created.
Stop Loss	The risk-control level. If price reaches SL, the trade is finished.
TP1	First target milestone. TP1 alone does not end the trade.
TP2	Final target. If price reaches TP2, the trade is finished.

LONG Trade Contract

LONG contract: price rises toward TP1 and TP2

In a LONG trade, price is expected to move upward. TP1 and TP2 are above entry. Stop Loss is below entry.

Event	LONG rule
TP1 hit	Price reaches TP1 upward.
TP2 hit	Price reaches TP2 upward. Trade is complete.
SL hit	Price reaches Stop Loss downward. Trade is complete.

SHORT Trade Contract

SHORT contract: price falls toward TP1 and TP2

In a SHORT trade, price is expected to move downward. TP1 and TP2 are below entry. Stop Loss is above entry.

Event	SHORT rule
TP1 hit	Price reaches TP1 downward.
TP2 hit	Price reaches TP2 downward. Trade is complete.
SL hit	Price reaches Stop Loss upward. Trade is complete.

TP1, TP2, and SL Law

Core rule

TP1 is a milestone. TP2 and SL are terminal. When price reaches TP2 or SL, the active trade is finished.

Trainees must not wait for a new signal to decide whether TP2 or SL ends a trade. If the final target or stop level is reached, the trade has completed according to the contract.

Event	Completion meaning
TP1	Milestone. Trade can continue toward TP2.
TP2	Final target. Trade is complete.
SL	Final stop. Trade is complete.
Rule Exit	Software-managed exit condition. Trade is complete when Rule Exit closes it.

PART 4

Runner State

Understanding TP1, runner, R, and health

TRAINING MANUAL

Runner State Explained

The runner tells trainees whether TP1 is pending, hit, or whether the remaining part of the trade is running toward TP2.

Runner text	Meaning
TP1 OPEN / RUN PEND	TP1 has not been reached yet. The trade is still waiting for the first milestone.
TP1 HIT / RUN OPEN	TP1 has been reached. The trade is still active because TP2 or SL has not ended it.
TP1 OPEN / RUN PEND with LIVE SHORT	A short trade is active and still waiting for price to reach TP1 downward.
TP1 OPEN / RUN PEND with LIVE LONG	A long trade is active and still waiting for price to reach TP1 upward.

Runner R / Health

Runner R / Health is a live-trade condition reading. It belongs only to the active trade. It is not historical probability and not a guarantee.

Field	Trainee meaning
Runner R	Current R condition of the active runner.
Health	Current live trade condition percentage.
Example: 0.37R / 46%	The runner is positive by 0.37R and currently has 46% health by the software condition model.
Example: 1.47R / 82%	The runner is strongly positive and health is high, but TP2 or SL still controls completion.

Room to SL / TP2

Room to SL / TP2 shows how much distance remains from current price to the stop and final target. It helps trainees understand the current risk/reward pressure during a live trade.

Value	Meaning
First value	Room to Stop Loss.
Second value	Room to TP2.
Small SL room	The trade is close to stop pressure.
Small TP2 room	The trade is close to final target completion.

Execution rule remains unchanged

Even if room is small, the trade ends only when price reaches TP2, SL, or Rule Exit.

PART 5

Closed Results

Reviewing completed trades correctly

TRAINING MANUAL

Closed Panel Purpose

CLOSED			NEW SIGNAL	LONG	SHORT	Read	PREVIEW	State	Detail
Trade	SHORT	TP1 + TP2	Trend	BLOCK 0%	PASS 100%	EMA 21 / 55	State	Locked	Not ready
Final / Real R	4501.56	Final 2R / Real 1.5R	Drive	PASS 79%	BLOCK 0%	Price Drive	Why	SHORT	Entry locked
Entry / Exit	4519.36	4501.56	Motion	PASS 100%	PASS 100%	ATR 0.0925 / RSI 44.72	Unlock	Active closes	Recheck
Stop	SL NOT HIT	SL 4528.26	Risk	PASS 100%	PASS 100%	TP path check	Prices	HIDDEN	Wait
Targets	TP1 + TP2	TP2 @ 4501.56	Gate	Locked	Locked	SHORT locks entry	Auth	Active signal	Chart locked
Time In/Out	05-26 10:50	05-26 12:15	Build State	- + by < > ↺ short / Q95			SHORT locks setup	Readiness	Locked
Setup / Q	RJCT SELL Q80%	Events TP1 22% TP2 11% SL 7% Rule 82% n415	Build	Frozen	Frozen	Wait active close	Lock	Live trade	No preview

Bottom panel region: Closed, New Signal, and Preview surfaces. Closed is the completed-trade review surface.

The Closed panel is not an active trade. It shows the most recent completed trade and the setup event history for that setup family.

Closed Rows Explained

Item	Meaning	Trainee action
Trade	Direction of the closed trade.	Check LONG or SHORT.
Result	How the trade ended.	Read TP1 + TP2, SL HIT, RULE, etc.
Final / Real R	Final exit R and estimated realized R.	Use for result review, not active entry.
Entry / Exit	Closed trade entry and exit prices.	Verify the completed path.
Stop	Whether stop was hit and where stop was located.	Confirm risk event.
Targets	Which targets were hit.	Confirm TP1/TP2 result.
Time In/Out	Entry time and final close time.	Review duration.
Setup / Q	Closed signal family and quality.	Review what type of setup produced the result.
Events	Historical event frequencies for similar completed setups.	Do not read as forecast.

Final R and Real R

Final / Real R separates final exit movement from estimated realized trade result.

Term	Meaning
Final R	R measured from entry to the final exit price.
Real R	Estimated realized result using the Academy runner model.
TP1 bank	50% of the position is treated as banked at TP1.
Runner	50% of the position continues toward TP2, SL, or Rule Exit.
Example: Final 2R / Real 1.5R	The final runner reached 2R, while the total trade result reflects partial TP1 banking.

Why two R values?

A trade can partially bank TP1 and still have a final runner result. Final R and Real R prevent trainees from mixing those two ideas.

Events Row

The Events row shows closed setup event frequencies for similar completed signals on the loaded chart.

Events are not probability

Events do not forecast the current trade. They are historical event frequencies. They do not need to add up to 100%.

Example	Meaning
Events TP1 40%	In the stored closed setup history, TP1 occurred in 40% of matching completed signals.
TP2 20%	TP2 occurred in 20% of matching completed signals.
SL 40%	SL occurred in 40% of matching completed signals.
Rule 40%	Rule Exit occurred in 40% of matching completed signals.
n35	Sample count: 35 matching completed signals in the loaded chart context.
Why values can exceed 100%	A trade can hit TP1 and later close by Rule or TP2; these are event frequencies, not final-outcome categories.

PART 6

New Signal and Preview Panels

Readiness, locks, and hidden prices

TRAINING MANUAL

New Signal Panel Purpose

The New Signal panel shows construction and readiness. It is not a command to enter a trade. It helps trainees understand why new entries are allowed, blocked, or locked.

Item	Meaning	Trainee action
Trend	Direction condition.	Check whether long or short trend is acceptable.
Drive	Price drive condition.	PASS means drive is acceptable.
Motion	Movement condition.	PASS means movement conditions are acceptable.
Risk	Trade contract feasibility.	PASS means risk/target path is acceptable.
Gate	New-entry permission state.	Locked means no new entry now.
Build State	Construction state plus Q-value.	Read state text first, Q-value second.
Build	Current construction action state.	Frozen often means active trade controls the chart.
Read	Plain-language reason.	Use it to understand why the panel is passing, blocked, or locked.

PASS, BLOCK, Locked, Frozen

Term	Meaning
PASS	The condition is currently acceptable by the software rules.
BLOCK	The condition is not acceptable now.
Locked	New trade action is not allowed now.
Frozen	The panel is not building a new trade because another state controls the chart.
Need drive / Q93	The setup needs stronger drive, with Q93 construction context.
Active short / Q98	An active short controls the construction state, with Q98 signal quality context.

Not a probability panel

New Signal percentages and Q-values are condition/readiness values. They are not a win forecast.

Preview Panel Purpose

The Preview panel tells trainees whether a possible future trade is allowed, locked, waiting, hidden, or not ready.

Item	Meaning	Trainee action
State	Overall preview state.	Locked means no preview trade is available.
Why	Reason for the preview state.	Read the cause: active trade, cooldown, live bar, etc.
Unlock	What must happen before preview can recheck.	Example: active closes, bar close, cooldown finish.
Prices	Whether preview prices are visible.	If HIDDEN, do not invent prices.
Auth	What controls the preview state.	Chart locked means active trade controls the chart.
Readiness	Whether preview is ready.	No preview means no candidate should be traded.
Lock	What is holding preview locked.	Live trade, cooldown, or wait state.

Hidden Prices Rule

Do not invent hidden prices

When Preview says Prices HIDDEN, no trainee should invent entry, SL, TP1, or TP2. Hidden means not ready.

Preview text	Trainee meaning
Prices HIDDEN	A candidate trade contract is not available.
Wait	The system is waiting for the right condition.
Entry locked	An active trade or lock prevents a new entry.
Chart locked	The chart is controlled by current active trade state.
Active lock	A live trade is blocking preview until it closes.

EDITION
2026

PART 7

Chart Lines and Labels

Visual help for the active contract

TRAINING MANUAL

Chart Contract Lines

Active chart labels are visual projections of the active contract levels: SHORT/LONG, SL, TP1, and TP2.

Chart lines help trainees see the active trade contract on the chart. The table remains the authority, and labels are shortened to reduce chart-edge clipping.

Chart label	Meaning
LONG / SHORT label	Active entry reference.
SL label	Stop Loss level.
TP1 label	First target milestone.
TP2 label	Final target level.
Label movement	Labels may be placed slightly closer to the candles for visibility; price levels do not change.

Table Authority vs Visual Projection

The table and chart lines should match. If a label is visually clipped or crowded, use the table values as the exact reference.

Authority rule

The table values are the exact contract reference. Chart lines and labels are visual help.

PART 8

EDITION
2026

Signal Lifecycle

From no live signal to
closed archive

TRAINING MANUAL

Signal Lifecycle Flow

A trainee should know which phase the software is showing. Most mistakes happen when a trainee treats a preview or construction phase as a live trade.

Lifecycle Phase Rules

Item	Meaning	Trainee action
No live signal	No active trade contract exists.	Do not enter from the software.
Setup forming	New Signal may show developing conditions.	Wait for a valid active signal.
Signal born	A live signal becomes active.	Read Entry, SL, TP1, TP2.
Trade active	Live trade contract is running.	Manage by contract levels.
TP1 milestone	First target reached.	Runner may remain open.
TP2 terminal	Final target reached.	Trade is complete.
SL terminal	Stop Loss reached.	Trade is complete.
Closed archive	Completed trade is stored.	Review result and events.
Cooldown/recheck	System waits before next trade.	Do not force a new trade.

PART 9

Worked Examples

Reading real screenshots

TRAINING MANUAL

Example: Live Short Before TP1

Live short example with TP1 still pending. The trade remains active because TP1 and TP2 are not yet reached.

Reading method: confirm Status is LIVE SHORT, read Entry/SL/TP1/TP2, then check whether current price has reached TP1 or terminal TP2/SL.

Example: TP1 Hit / Runner Open

TP1 milestone example. TP1 is hit, but TP2 remains pending, so runner can stay open.

Correct reading: TP1 is a milestone. The trade is still active only if TP2 and SL have not been touched.

Example: Closed Result Review

When the trade completes, the Closed panel becomes the review surface. The trainee should read Result, Final / Real R, Entry / Exit, Targets, Time In/Out, Setup / Q, and Events.

Closed result	Meaning
TP1 + TP2	Both targets were reached. Trade completed by TP2.
SL HIT	Stop Loss was reached. Trade completed by SL.
RULE	Rule Exit closed the trade.
TP1 + RULE	TP1 was reached, then Rule Exit closed the remaining runner.
TP1 + SL	TP1 was reached, then SL closed the remaining runner.

EDITION
2026

PART 10

Trading Discipline

Correct use and common mistakes

TRAINING MANUAL

How Trainees Should Use the Software

Phase	Correct action
Before trade	Check Active Signal first. No live signal means no software trade.
At live signal	Record Entry, SL, TP1, TP2 from the Active panel.
During trade	Watch TP1 milestone, TP2 final target, and SL final stop.
After TP1	Runner can stay open only while TP2/SL are not reached.
At TP2 or SL	Trade is complete when price reaches the level.
After close	Review Closed panel and wait for valid next state.

Common Mistakes and Corrections

Mistake	Wrong interpretation	Correct interpretation
Mistake	Q100 means guaranteed win.	Correction: Q is construction quality, not certainty.
Mistake	Events TP1 40% forecasts this trade.	Correction: Events are closed setup frequencies, not forecast.
Mistake	Preview prices are hidden but I can estimate them.	Correction: HIDDEN means no usable preview contract.
Mistake	TP1 hit means the trade is finished.	Correction: TP1 is milestone; TP2 or SL ends it.
Mistake	TP2/SL must wait for candle close.	Correction: Active TP2/SL completion is price-touch based.
Mistake	New Signal PASS means immediate entry.	Correction: Use only Active Signal live contract for entries.

Risk and Discipline Rules

Risk rule

Never increase lot size because Quality is high. Follow Academy risk rules and always respect Stop Loss.

Rule	Reason
Use stop loss	Every live trade has an SL. Do not remove it.
Avoid revenge trading	After SL, wait for proper next signal conditions.
Do not override locks	Locked means the software is not allowing that action.
Do not chase	If entry is missed, do not invent a late entry.
Review after trade	Closed results teach discipline and pattern recognition.

PART 11

Scenario Drills

Practice reading without guessing

TRAINING MANUAL

Drill 1: No Live Signal

Item	Answer
Panel shows	Status: NO LIVE SIGNAL; Preview: Locked; Prices: HIDDEN.
Question	Can trainee enter a trade from Preview?
Answer	No. Hidden prices and no live signal mean no trade contract.
Correct action	Wait for a LIVE LONG or LIVE SHORT active signal.

Drill 2: Live Short, TP1 Pending

Item	Answer
Panel shows	LIVE SHORT, Entry 4509.39, TP1 4494.49, TP2 4479.59.
Question	Price is still above TP1. Is TP1 hit?
Answer	No. For a short, TP1 requires price to reach TP1 downward.
Correct action	Trade remains active. Watch TP1, TP2, and SL contract levels.

Drill 3: TP1 Hit, TP2 Pending

Item	Answer
Panel shows	SHORT TP1 HIT and Runner: TP1 HIT / RUN OPEN.
Question	Is trade complete?
Answer	Not unless TP2, SL, or Rule Exit has also closed it.
Correct action	Runner remains open toward TP2 or until SL/Rule Exit closes it.

Drill 4: TP2 or SL Touch

Item	Answer
Panel shows	LIVE SHORT with TP2 below entry and SL above entry.
Question	Price touches TP2. What happens?
Answer	Trade is complete. TP2 is terminal.
Question	Price touches SL. What happens?
Answer	Trade is complete. SL is terminal.
Correct action	Review Closed panel after completion.

PART 12

Glossary and FAQ

Fast reference for trainees

TRAINING MANUAL

Glossary A-M

Term	Definition
Active Signal	The panel that shows the current live trade contract.
Bar close	The close of the current candle/bar. Used for signal birth/readiness, not for delaying active TP2/SL touch completion.
Build State	Construction state plus optional Q-value.
Cooldown	Waiting period after trade activity or locking condition.
Entry	Active trade entry level.
Events	Closed setup event frequencies. Not forecast.
Final R	R measured at the final exit price.
Gate	Permission state for new signal construction.
Health	Current active runner condition percentage.
Live Long	Active buy trade.
Live Short	Active sell trade.

Glossary N-Z

Term	Definition
No live signal	No active trade contract exists.
Preview	Candidate/readiness panel. Not a trade instruction by itself.
Q	Construction quality notation.
Real R	Estimated realized result using the Academy TP1-bank/runner model.
Rule Exit	Software rule that closes an active trade.
Runner	Remaining trade state after TP1 milestone.
SL	Stop Loss. Terminal trade-completion level.
Setup / Q	Closed setup family and quality.
TP1	First target milestone.
TP2	Final target. Terminal trade-completion level.

Frequently Asked Questions

Question	Answer
Can I trade when there is no live signal?	No. A valid software trade requires LIVE LONG or LIVE SHORT in Active Signal.
Is Quality the same as probability?	No. Quality is construction strength, not certainty.
Why can Events add above 100%?	Because they are event frequencies, not exclusive final outcomes.
When is a trade finished?	When TP2, SL, or Rule Exit closes it.
Why are Preview prices hidden?	Because the candidate is not ready or not allowed.
Which is exact: table or chart label?	The table is the exact contract reference; chart labels are visual help.

APPENDIX

Reference Pages

Commercial operating summary

--	--	--	--	--	--

TRAINING MANUAL

One-Page Operating Summary

Rule	Summary
Trade only from Active Signal	LIVE LONG or LIVE SHORT defines the current trade contract.
Use exact contract levels	Entry, Stop Loss, TP1, and TP2 are the reference levels.
TP1 is milestone	TP1 can open runner management.
TP2 and SL are terminal	Price reaching TP2 or SL completes the trade.
Final / Real R	Final R is exit movement; Real R reflects TP1-bank/runner model.
Events are history	Events are closed setup frequencies, not forecast.
Preview is not entry	Hidden prices or locked preview means no trade contract.
Respect risk	Use SL and Academy risk rules.

Trainee Checklist

- ☐ I checked Active Signal before looking at other panels.
- ☐ I confirmed whether the software shows NO LIVE SIGNAL, LIVE LONG, or LIVE SHORT.
- ☐ I read Entry, Stop Loss, TP1, and TP2 from the Active panel.
- ☐ I understand TP1 is milestone and TP2/SL are terminal.
- ☐ I did not use hidden Preview prices.
- ☐ I did not treat Quality or Events as probability.
- ☐ I reviewed the Closed panel after completion.
- ☐ I followed Academy risk rules.

Final reminder

Do not guess. Read the panel, obey the contract, and follow Academy discipline.

Contact and Support
